Highlight Title: Digital library curriculum modules now available

Highlight Text: With support from NSF, a collaborative team of researchers at Virginia Tech (led by Edward A. Fox) and the University of North Carolina at Chapel Hill (led by Barbara M. Wildemuth and Jeffrey Pomerantz) has developed a dozen curriculum modules intended for use in graduate courses on digital libraries (DLs). The modules are part of a larger curriculum framework; additional modules will continue to be added by the research team and others. The curriculum framework is intended for use in both computer science (CS) and information and library science (ILS) programs.

Each module provides suggested readings, lecture notes, and class activities, and fits within the curricular framework developed earlier by the team. The modules cover DL history, digitization, metadata, DL architecture, DL applications, information needs, information seeking behaviors, interaction design and usability assessment, reference services, preservation, DL evaluation and user studies, and intellectual property issues. Each module has been reviewed by experts in the field; in addition, modules were field tested in eight different universities during the fall 2008 semester. Modules to be added include four developed in the fall 2008 Virginia Tech computer science advanced graduate class on digital libraries, where nine others had been tested. These new modules will be reviewed and later included: file formats (and transformation and migration), personalization, protocols, and web archiving.

The process of module development also has supported the development of a vibrant DL education community. While the project team consists of only five people, almost 150 others have been involved in module development, review, or field testing; providing input and advice to the project; and/or participating in project-funded doctoral consortia.

NOTE: Insert only text in the box. Text Boxes expand to accommodate your entries.

In terms of intellectual merit, why is this outcome notable and/or important?

Through this project, a curriculum for digital libraries education and the materials to support it are being made available to CS and ILS educators throughout the US and the world. The curriculum framework and the individual modules are both theory-based (drawing on the 5S framework for digital libraries) and empirically-based (drawing on analyses of DL research literature and syllabi); they should help further define the field as a well-established discipline. In addition, this work draws on over
In terms of broader impacts, why is this outcome notable and / or important?

The curriculum framework and modules developed through this project will have a strong positive impact on the quality of DL education and training. The broad base of support for this work demonstrates that it will be disseminated widely, rather than just being implemented locally. In summary, it will improve the education of the next generation of digital librarians and DL developers, thus enhancing the quality of the DLs they create and manage.

Does this highlight represent transformative or potentially transformative research? If so, please explain why.

☐ Yes  ☐ No

No.

Does this highlight represent Broadening Participation? If so, please explain why.

☐ Yes  ☐ No

Yes, indirectly. Because many ILS programs are predominantly women, strengthening the DL curriculum in these programs is likely to bring more women into the field of digital libraries.

Are there existing or potential societal benefits of this research? It is important for NSF to be able to provide examples of NSF-supported research that have societal benefits, including benefits to the U.S. economy. If so, please explain why.

☐ Yes  ☐ No

Yes. As the education of digital librarians and DL developers is improved, the quality of their work will have a positive impact on the users of the DLs they create and manage. These users may include a broad range of the US population, including scholars, cultural institutions and their target audiences, educators at all levels, and the general public.

Select Primary (and Secondary) Strategic Outcome Goal

Included below are two tables – titled Primary Strategic Outcome Goal and Secondary Strategic Outcome Goal.

All NSF projects have “Primary” strategic outcome goals and they may also have “Secondary” strategic outcome goals. In the PRIMARY strategic outcome goal table please select one category (i.e., one column) that BEST DESCRIBES your project’s highlight. Within that column, please check one or more boxes that apply. If your project also has clear Secondary strategic outcome goals, select the appropriate column in the second table labeled “Secondary Strategic Outcome Goals and check as many boxes within that column that describe your project. So, for example, if your Primary Strategic Outcome Goal was Discovery, your Secondary Goal may be Learning.

Primary Strategic Outcome Goal
Decide whether your project’s Primary Strategic Outcome goals address Discovery, Learning or Research Infrastructure. For whichever of the three you select, please check one or more boxes within that column that best describe your project.

### Discovery

Foster research that will advance the frontiers of knowledge, emphasizing areas of greatest opportunity and potential benefit and establishing the nation as a global leader in fundamental and transformational science and engineering.

**Please Note:**
1. If you are reporting an outcome from an EPSCoR Research Infrastructure Improvement grant, or a research grant co-funded with the EPSCoR Program, please check the EPSCoR box under DISCOVERY, as well as the box that represents the area of science, engineering, or education for the project.
2. If you are reporting an outcome of research conducted at an NSF-funded large facility and check a category under Discovery for the PRIMARY goal, please also check the Major Multi-User Facilities category under Research Infrastructure for the SECONDARY goal.

- Biological Sciences
- Computer & Information Science and Engineering
- Cyberinfrastructure (excluding Shared Cyberinfrastructure Tools)
- Engineering Research
- Small Business Innovation Research/Small Business Technology
- Geosciences: Earth, Atmosphere, and Ocean Sciences
- Social, Behavioral, & Economic Sciences
- Polar Sciences: Arctic and Antarctic Research
- CAREER: Faculty Early Career Program
- EPSCoR: Experimental Program to Stimulate Competitive Research
- International Collaborative Research
- Ed. Res. And Evaluation to Improve STEM Learning and Teaching
- Centers for Analysis & Synthesis
- Centers for Chemical Innovation
- Engineering Research Centers
- Materials Res. Science & Eng Centers/Networks
- Nanoscale Science & Eng Centers/Networks
- Science & Tech Centers
- Science of Learning Centers

### Learning

Cultivate a world-class, broadly inclusive science and engineering workforce, and expand the scientific literacy of all citizens.

- K-12 Education
- Teacher Training
- Undergraduate Education
- Graduate Education
- Postdoctoral Fellowships, including International Postdoctoral Fellowships
- International Research Experiences for Undergraduate & Graduate Students
- Public Understanding of Science
- Broadening Participation to Improve Workforce Development
- Promoting CyberLearning Strategies to Enhance STEM Education
- Professional and Career Development

### Research Infrastructure

Build the nation’s research capability through critical investments in advanced instrumentation, facilities, cyber-infrastructure and experimental tools.

**Please Note:** If you are reporting an outcome of research conducted at an NSF-funded large facility and check the Major Multi-User Facilities category under Research Infrastructure for the PRIMARY goal, please also check the appropriate category under Discovery for the SECONDARY goal.

- Academic Research Fleet
- ATLAS – A Toroidal Large Angle Spectrometer
- CMS – Compact Muon Solenoid
- Cornell Electron Storage Ring
- Gemini Observatory
- IRIS – Incorporated Research Institutes for Seismology
- Integrated Ocean Drilling Program
- Large Hadron Collider
- Laser Interferometer Gravitational Wave Observatory (LIGO)
- MREFC Projects
- National Astronomy and Ionosphere Center (NAIC)
- National Center for Atmospheric Research (NCAR)
- National High Magnetic Field Laboratory
- National Nanofabrication Infrastructure Network
- National Optical Astronomy Observatory (NOAO)
- National Solar Observatory
- National Superconducting Cyclotron Laboratory
- Network for Earthquake Engineering Simulation (NEES)
- Polar Facilities & Logistics
- Major Research Instrumentation (MRI) Program
- Shared Cyberinfrastructure Tools
- Other Infrastructure and Research Resources

---

### Secondary Strategic Outcome Goal

Complete this table **only** if your project has clear Secondary Outcome goals. So, for example, if your Primary Strategic Outcome Goal was Discovery, then your Secondary Strategic Outcome Goal can be either Learning or Research Infrastructure. Please check one or more boxes within that column that describe your project’s Secondary Strategic Outcome goals:

<table>
<thead>
<tr>
<th>Discovery</th>
<th>Learning</th>
<th>Research Infrastructure</th>
